Scattering loss by tiny aberrations

$$\begin{aligned}
 E_{ref} &= E_{ref}^0 \exp(i\omega t - ikz) \cdot \exp(2ikf(x,y)) \\
 &= E_{ref}^0 \exp(i\omega t - ikz)(1 + i2kf - 2(kf)^2) \\
 &= E_{ref}^0 \exp(i\omega t - ikz)(1 - 2(kf)^2) + E_{ref}^0 \exp(i\omega t - ikz)i2kf
 \end{aligned}$$

$$f(x,y) = \sum_{nx,ny} a_{nx,ny} \sin(n_x \omega_x x + n_y \omega_y y + \varphi_{nx,ny})$$

$$dF = E_{ref}^0 k \sum_{nx,ny} a_{nx,ny} (\exp(i\Phi_{nx,ny}^+) - \exp(i\Phi_{nx,ny}^-))$$

$$\Phi^0 = \omega t - kz$$

$$\Phi_{nx,ny}^\pm \equiv \Phi^0 \pm (n_x \omega_x x + n_y \omega_y y + \varphi_{nx,ny})$$

Small size aberration
lossy area

$$dP = \iint dx dy |E_{ref}^0|^2 4k^2 f^2$$

$$\approx P_{ref}^0 4k^2 \iint dx dy f^2$$

$$= P_{ref}^0 4k^2 \sigma^2 S$$

$$= P_{ref}^0 \left(\frac{4\pi\sigma}{\lambda} \right)^2 S$$

$$\theta \sim n \sqrt{\omega_x^2 + \omega_y^2} / k \sim n \cdot \lambda / a \quad (a \text{ is typical spacial size})$$

$$dx = L_{cav} \cdot \theta \sim L_{cav} \cdot \lambda / a = 4 / a(\text{mm}) \text{ m}$$

$$\sigma^2 = \frac{\iint dx dy f^2}{S} \quad 2$$

Small defects in a FP cavity

Small area loss or shape anomaly

$$d(x,y) = h \cdot \exp\left(-\frac{(x-x_0)^2 + y^2}{w^2}\right) : \sqrt{(x-x_0)^2 + y^2} < 2w$$

$$= 0 : \sqrt{(x-x_0)^2 + y^2} > 2w$$

$$\delta(x,y) \equiv \frac{E(x,y)}{E(0,0)} - \frac{E_0(x,y)}{E_0(0,0)}$$

Small lossy area in a FP cavity

- $W=2\text{mm}$, $x_0=2\text{cm}$
- Loss $\sim (4\pi\sigma/\lambda)^2$
- Weak dependence on w
- Ripple spreads out
- Spatial wavelength of the ripple is determined by x_0

Small area bump in a FP cavity

- $W=5\text{mm}$, $x_0=6\text{cm}$, $h=10\text{nm}$
- $\text{Loss}(w=5\text{mm}) \sim 0.7\text{ppm } h^2$
- $\text{Loss}(w=1\text{mm}) \sim 0.04\text{ppm } h^2$
- Ripple spreads out
- Spatial wavelength of the ripple is determined by x_0

5

Heating of small area

Muzammil heated surface using laser with size of 0.5, 1, 2mm at 2cm away from the center

Surface deformation with 1mm size beam, 0.425W/100 absorption

Surface deformation with 1 and 2 mm size beam, 0.425W/100 absorption

G1000484-v1

Hiro Yamamoto at OWG mtg @ on April 23rd, 2010

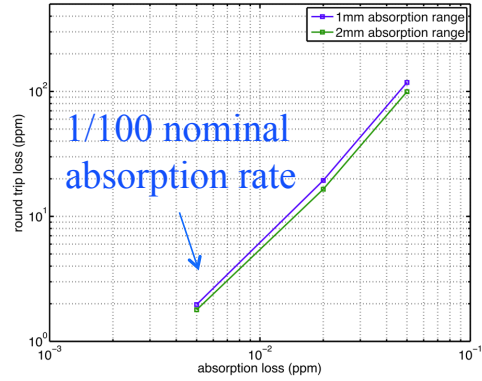

6

Loss by small area heating

Field deformation with 1mm size beam, 0.425W/100 absorption

Round trip loss vs absorption rate

absorbed power
 = local absorption rate \times area \times power density
 = (local absorption rate $\times \frac{\text{area}}{\text{beam size}^2}$) (beam size² \times power density)
 ~ (local absorption rate $\times 10^{-4}$) (beam size² \times power density)
