# Introduction

This document presents the tests performed to characterize and validate the "HAM-ISI LLO Unit #3". This unit was the 3rd unit assembled for aLIGO at LLO. This unit was partially assembled in Fall 2010, but following the discovery of unauthorized repairs in the parts, the assembly was interrupted. All parts in questions were disassembled. This unit was the 1st to be re-assembled when the assembly started back in Spring 2011.

Following that testing, the testing procedure was modified (going to v7), that latest version of the test report (v5)was created afterwards, some data being re-processed. In other words, v4 was still using the older requirements.

The procedure document used to perform this test is:

- E1000309 –V7 - aLIGO HAM-ISI, Pre-Integration Testing Procedure, Phase I (post assembly, before storage)

Other useful information can be found in:

- E1000300 - HAM-ISI LLO test stand: software and electronic check

# I. Pre-Assembly Testing

## • Step 1: Position Sensors

Note: The back panel reads 0.508V/0.001"

S/N sensor	S/N board	ADE Gap Standoff(m m)	Location on the Jig	Gap Standoff on Jig(mm/in)	Voltage before zeroing	Voltage after zeroing. Prebake	Voltage after zeroing. Post bake
12057	NR	NR	NR	NR	NR	NR	NR
12026	NR	NR	NR	NR	NR	NR	NR
12013	NR	NR	NR	NR	NR	NR	NR
12059	NR	NR	NR	NR	NR	NR	NR
12056	NR	NR	NR	NR	NR	NR	NR
12083	NR	NR	NR	NR	NR	NR	NR

NR: not recorded

Will be measured for the next units.

### Sensors noise spectra measured before baking:

Figure - H1 and V1 sensor noise

Figure - H2 and V2 sensor noise

#### Figure - H3 and V3 sensor noise

### **Acceptance Criteria:**

- Power spectrum magnitudes must be lower than:
  - o 9.e-10 m/ $\sqrt{\text{Hz}}$  at 0.1Hz
  - o 6.e-10 m/ $\sqrt{\text{Hz}}$  at 1Hz

<u>Issues/difficulties/comments regarding this test:</u> Values of sensor gaps and zeroing were not recorded. Waived for this unit.

12013 (used for H2) is noisier than other sensors, still passes.

**Test result:** 

Passed: X

Failed: \_\_\_\_

## • Step 2: GS13

All the data related to GS-13 post podding testing can be found in the SVN at : SeismicSVN\seismic\Common\Data\aLIGO\_GS13\_TestData\PostMod\_TestResults\_PDFs. E1000058 spreadsheet provides the status of each individual GS-13 at LLO site during aLIGO HAM assembly

### Data files in SVN at:

 $/opt/svncommon/seisvn/seismic/Common/Data/aLIGO\_GS13\_TestData/PostMod\_TestResults\_RawASCII$ 

### Scripts files for processing and plotting in SVN at:

/opt/svncommon/seisvn/seismic/Common/MatlabTools

- gs13qatest.m

### **Figures in SVN at:**

/opt/svncommon/seisvn/seismic/Common/Data/aLIGO\_GS13\_TestData/PostMod\_TestResults\_PDFs

Step 2.1 – Horizontal GS-13s

### Huddle testing

Figure - Huddle testing of Horiz GS-13 804,795, and 792 after aLIGO modifications

Step 2.2 – Vertical GS-13s 

## Huddle testing

Figure - Driven Transfer Function of Vert GS-13 679,683 and 699 after aLIGO modifications

### Acceptance Criteria:

- GS13 should have been already modified and tested. GS-13 Inspection/Pod Assembly (D047810). Checklist is defined in F090070-v6
- Resonant frequency at 1 Hz (huddle testing)
- No spring resonance on vertical driven tests

**Test result:** 

Passea: A	Passed:	Χ		
-----------	---------	---	--	--

Failed: \_\_\_\_

## • Step 3: Actuators

Actuator data can be found at: T0900564. Actuator inventory is made at Section II – Step 1.

#### Step 2: Check torques on all bolts

### **Acceptance Criteria:**

All bolts should trip the wrench, and start moving immediately after. If any bolts in a pattern \_ move before torque is reached, recheck after all bolts are brought to spec.

**Test result:** 

<b>Passed:</b>	Χ	Failed:	

Step 3: Check gaps under Support Posts

### **Acceptance Criteria:**

\_ A 0.001 inch shim cannot be passed freely through any connection to Stage 0 or between post and gussets. If shim can pass through, loosen all constraining bolts, and then retighten iteratively from the center of the part to the edges. Retest.

### **Test result:**

Passed: X Step 4: Pitchfork/Boxwork flatness before Optical Table install 

### **Acceptance Criteria:**

Shim inserted won't pass between parts. -

### **Test result:**

Passed: X

Failed:

Failed:

Step 5: Blade spring profile 

Blade #	Base (")	Tip(")	Flatness (mils)				
1	.495	.491	+4				
2	.501	.489	+12				
3	.498	.490	+8				
Table 1 Diada profile							

 Table 1 - Blade profile

### **Acceptance Criteria:**

Blades must be flat within 0.015" inches. \_

**Test result:** 

Passed: X

Failed: \_\_\_\_

Actuator	Front Gap (1/1000'')	Back Gap (1/1000'')
V1	80	90
V2	90	75
V3	95/85	65/80
H1	85	
H2	80	
H3	80	

## • Step 6: Gap checks on actuators-after installation on Stage 1

### Acceptance Criteria

- Gaps must be within 0.010" of design (i.e. 0.090" and .070" pass, but 0.095" and 0.065" doesn't).

**Test result:** 

Passed: \_\_\_\_\_ Failed: \_\_X\_\_

• Step 7: Check level of Stage 0

Not recorded.

**Test result:** 

Passed: \_\_\_\_

Failed: X

## • Step 8: Check level of Stage 1 Optical Table

Optical Level measurement of Stage 1 at large (12 - 15) number of points.

Max angle=(.5/64)/85.59= 91 urad

### **Acceptance Criteria**

- The maximum angle of the table with the horizontal mustn't exceed  $\sim 100 \mu rad$ 

Test result: Passed: X Failed:

• Step 9: Mass budget

Figure – Keel Masses and Wall masses location

Figure - Optical table masses distribution

Table – Capacitive position sensor readout after gap set-up

Issues/difficulties/comments regarding this test: HAM-ISI – LLO unit#3 uses synchronized satellite boxes

### Acceptance criteria:

- All mean values must be lower than 400 cts (a bit less than .0005").
- All standard deviations below 5 counts.
- No cross talk

**Test result:** 

Passed: X

Failed:

## Step 3 - Measure the Sensor gap

Sensors	Gap measured on	Gap measured on
H1	NR	0.085"
H2	NR	0.085"
H3	NR	0.085"
V1	NR	0.082"
V2	NR	0.085"
V3	NR	0.082"

### Acceptance criteria:

Sensors gap measured on the jig and on the optic table must be:

0.080" +/-0.002" \_

### **Test result:**

Passed: X Failed: \_\_\_\_

• Step 4 - Check Sensor gaps after the platform release

	Table I	ocked	Table un	locked
Sensors	Offset (Mean)	Std deviation	Offset (Mean)	Difference
H1	-274.44	0.83234	664.2	938.64

V2	31629	-32519		Х
V3	19762	-21787		Х

Table - Optic table range of motion

### Acceptance criteria:

- The vertical sensor readout be positive when the optic table is pushed in the +Z direction
- The horizontal sensor readout be negative when the optic table is pushed in the +RZ direction - Step 7.1
- Step 7.1
  - $\circ$  Absolutes value of all estimated motions must be higher than 16000counts (~0.020")
- Step 7.2
  - No contact point on sensors
  - Absolute value of sensor read out must be higher than 16000counts (~0.020")
  - o No contact point on actuators

**Test result:** 

Passed: X Failed: .

## Step 6 - Position Sensors unlocked/locked Power Spectrum

### Data files in SVN at:

/opt/svncommon/seisvn/seismic/HAM-ISI/X2/Data/Unit\_3/ Powerspectra/Undamped - LLO\_HAM\_ISI\_Unit\_3\_Calibrated\_PSD\_CPS\_GS13\_Unlocked\_Locked\_2011-03-25.mat - LLO\_HAM\_ISI\_Unit\_3\_Calibrated\_PSD\_GS13\_Table\_Tilted\_2011-03-29.mat

### Scripts files for processing and plotting in SVN at:

	unlocked	Min	10 <sup>-7</sup>	$5x10^{-8}$	8x10 <sup>-9</sup>	$5 \times 10^{-10}$		$2x10^{-10}$	$10^{-10}$

Table - Step 6 -Normal conditions-Sensors power spectra requirements

**Test result:** 

Passed: X

Failed:

## Step 7 - GS13 power spectrum -tabled tilted

The figure below presents the GS13 power spectrum when the table is unlocked and loaded with a 20Kg mass at one of its corner.

### Data files in SVN at:

/opt/svncommon/seisvn/seismic/HAM-ISI/X2/Data/Unit\_3/ Powerspectra/Undamped - LLO\_HAM\_ISI\_Unit\_3\_Calibrated\_PSD\_CPS\_GS13\_Unlocked\_Locked\_2011-03-25.mat - LLO\_HAM\_ISI\_Unit\_3\_Calibrated\_PSD\_GS13\_Table\_Tilted\_2011-03-29.mat

### Scripts files for taking and processing the data, and plotting it in SVN at:

/opt/svncommon/seisvn/seismic/HAM-ISI/X2/Scripts/Data\_collection/

- Powerspectra\_Measurements\_Tilted\_HAM\_ISI.m

### **Figures in SVN at:**

opt/svncommon/seisvn/seismic/HAM-ISI/X2/Data/Unit\_3/Figures/ Powerspectra/Undamped - LLO\_HAM\_Unit\_3\_Calibrated\_PSD\_GS13\_Unlocked\_Locked\_2011-03-25.pdf - LLO\_HAM\_ISI\_Unit\_3\_Calibrated\_PSD\_GS13\_Table\_Tilted\_2011-03-29.pdf

### Acceptance criteria:

- With table unlocked and tilted, magnitudes of power spectra must be fully included within:

Sensor	ISI State	Frequency	$5 \text{x} 10^{-1} \text{Hz}$	1	10	100	1000
GS-13	Table	Max	2x10 <sup>5</sup>	2x10 <sup>6</sup>	8x10 <sup>-8</sup>	$4x10^{-11}$	$3x10^{-14}$
	Tilted	Min	10 <sup>-8</sup>	10 <sup>-9</sup>	$2x10^{-11}$	10 <sup>-14</sup>	10 <sup>-17</sup>

Table - Table Tilted- Sensors power spectra requirements

**Test result:** 

Passed: X

Failed: \_\_\_\_

## • Step 8- GS13 pressure readout

### Scripts files for taking and processing the data, and plotting it in SVN at:

seismicSVN/Common/MatlabTools

- gs13Presstest.m

### **Figures in SVN at:**

- seismicSVN/Common/Data/Pressure\_Plots

#### **Figure – Pressure Plots**

Issues/difficulties/comments regarding this test

We know that the drop to 0 at the end of the plot is due to issues with getdata. We can notice issues with V2 dropping a few hundreds of counts now and then. We could not measure V3, due to an issue with the read-out electronics.

#### Acceptance criteria:

- The pressure on all channels must be 25000 counts +/- 3000 counts

- All channels must follow comparable trend

**Test result:** 

Passed: \_\_\_\_

Failed: X

Actuator	V1		H1		V2

V1 readout (count)	-19988	19535
V2 readout (count)	-25296	27191
V3 readout (count)	-22424	21599

## • Step 10 - Actuators Sign and range of motion (Local drive)

 Table - Range of motion - Local drive

### Data files in SVN at:

/opt/svncommon/seisvn/seismic/HAM-ISI/X2/Data/Unit\_3/Static\_Tests - LLO\_HAM-ISI\_Unit\_3\_Range\_Of\_Motion\_20110329.mat

### Scripts files for taking and processing the data, and plotting it in SVN at:

/opt/svncommon/seisvn/seismic/HAM-ISI/X2/Scripts/Data\_collection

- Range\_Motion\_HAM\_ISI.m

### Acceptance criteria:

- Main couplings sensors readout must be at least 16000 counts (~0.02")
- A positive offset drive on one actuator must give positive sensor readout on the collocated sensor. Signs will also be tested when measuring local to local transfer functions.

**Test result:** 

Passed: X Failed:

Lockers	D.I readout for a negative drive	D.I readout without any drive	D.I readout for positive drive	
Α	19	0	-19	
В	19.25	0	-19

V2	-15595	551	16437	-32032
V3	-17675	-1772	14357	-32032
			Average	-32067
			••	

## Step 11 - Vertical Sensor Calibration

Table - Calibration of capacitive position sensors

Vertical sensitivity:	32067/37.91 = 845.3 count/mil
-----------------------	-------------------------------

or $845.5 \text{ count/mil} \approx 1/1058 \text{ v/count} = 0.510 \text{ v/mil}$	or	845.3 count/mil * 1/1638 V/count = 0.516V/mil
---	----	---

or 25400nm/mil \* 1/845.3 mil/count = 30.05 nm/count

### **Nominal Calibration**

CPS Sensitivity: 20V/0.039'' = 20V/39mils = 0.513V/mil

Calibration in counts:  $2^{15}/20 * 20/39 = 840$  count/mil

or 25400 nm/mil \* 1/840 mil/count = 30.2nm/count

### Difference with Nominal sensitivity = (845.3-840)/840=-0.63%

### Acceptance criteria:

- Deviation from nominal value < 2%. Nominal value is 840 count/mil.

**Test result:** 

Passed: X Failed:

## Step 12 - Vertical Spring Constant

Results presented below are obtained after the initial sensors calibration.

	Mean diff			Error with
Sensors	counts	Mean diff m	K (N/m)	average
V1	7370	2.23E-04	8.81E+04	5.59 %
V2	7538	2.28E-04	8.62E+04	3.32 %
V3	8553	2.58E-04	7.60E+04	-8.91 %
		Average (N/m)	8.34E+04	
		Total Stiffness		
		(N/m)	2.50E+05	

**Table - Vertical spring constant** 

#### Acceptance criteria:

- +/-2 % of 2.4704e5 N/m (i.e. between 2.421e5 and 2.520e5 N/m)
- +/-5% of variation between each spring and the average

The measured error on the vertical stiffness is 1.32%.

- LZMP.fig

### X & Y offsets:

X offset (mm)	0.399
Y offset (mm)	0.738

Table – Offset of the Lower Zero Moment Plane

The results from two measurements are presented on the figure below:

Figure - Lower Zero moment plane – Main and cross couplings at low frequency

Issues/difficulties/comments regarding this test

It was discovered after the testing was complete and the unit stored away, that this measurement was done with an insufficient amount of averages. This measurement should be redone during Phase #2 of the testing.

### Acceptance criteria:

- X offset must be less than 2 mm
- Y offset must be less than 2 mm

**Test result:** 

Passed: X Fail

Failed: \_\_\_\_

## Step 19 - Damping loops

In this step, HAM6 damping loops are implemented. First, damping performances are evaluated in simulation. Second, Damping loops are implemented and performance is experimentally measured.

## Step 19.1 - Transfer functions - Simulation

### Scripts files for processing and plotting in SVN at:

/opt/svncommon/seisvn/seismic/HAM-ISI/X2/Data/Unit\_3/Transfer\_Functions/Simulation/Damping

- HAM\_ISI\_LLO\_Unit\_3\_Damping\_TF\_2011\_04\_18.m

- Damping\_LOOP\_V1\_V2\_V3.fig

### **Results are saved in SVN at:**

/opt/svncommon/seisvn/seismic/HAM-ISI/X2/Data/Unit\_3/Transfer\_Functions/Simulations/ Damping/

The following figures present the plant, controller, open loop, closed loop and sensitivity of vertical and horizontal damping loops. H1 (respectively V1) are plotted in solid line, H2 (respectively V2) are plotted in dash line, H3 (respectively V3) are plotted in dash-dot line.

Figure - Horizontal damping loops - Simulation

### Figure - Vertical damping loops - Simulation

## Acceptance criteria:

- HAM6 damping loops must implemented and stable with
  - Phase margin must be at least 45°
  - o Gain margin must be at least 20dB

**Test result:** 

Passed: X Failed:

## Step 19.2 - Powerspectra – Experimental

### Data files in SVN at:

/opt/svncommon/seisvn/seismic/HAM-ISI/X2/Data/Unit\_3/Powerspectra/Damping/

### Scripts files for taking data and plotting in SVN at:

/opt/svncommon/seisvn/seismic/HAM-ISI/X2/Scripts/Data\_Collection/

- Powerspectra\_Measurements\_Undamped\_Damped\_HAM\_ISI.m

#### **Figures in SVN at:**

/svncommon/seisvn/seismic/HAM-ISI/X2/Data/Unit\_3/Figures/Powerspectra/Damping/

- LLO\_HAM\_ISI\_Unit\_3\_Calibrated\_PSD\_CPS\_Undamped\_Damped\_2011\_04\_08.fig
- Simulation\_vs\_experimental\_Suppression.fig

### Sensitivity:

The figure below compare the sensitivity ('Undamped/Damped') of LLO HAM (Aug 2008) and LHO Unit 2. Performances are very similar, which confirms that we can use the damping loop as they are (modulo electronics change compensation). The plot also shows that the measured performance matches with the prediction.

Figure – Horizontal (left) and vertical (right) damping loops - Experimental

## Acceptance criteria:

- HAM6 damping loop must stable when all damping loops are engaged
- Similar damping effect than in simulated plots

**Test result:** 

Passed: X Failed:

# Conclusion

A few issues were found during the testing of this unit. Some were only discovered after reprocessing of the data following the requirements update. This unit was approved based on the precedent version of this document (v4). The known issues are summed up here:

- sensor gaps not recorded on the jig
- actuator gaps do not meet requirements, it was decided during the approval meeting to
- LZMP measurements were done with only 1 average (high uncertainty), they should be redone on the side of the chamber
- Vertical spring constant: one spring appears to have a much lower constant than the others (-8.91% than the average of the 3). Because no significant difference can be seen between the 3 corners in the vertical local to local transfer functions, it's likely that it's due
- Could not check pressure on V3 GS-13 and V2 GS-13 gives some weird results.
