Clean room standards

For a clean assembly all LIGO standards should be followed, as presented in the latest version of the **LIGO Contamination Control Plan (E0900047)**. Clean room garb including UHV gloves should be worn when working with parts.

All tools that come in contact with assembly should be cleaned to class B standards.

Assembly will be done under a portable clean room. Any time a part of the assembly is not covered by the portable clean room or not being actively worked on it should be covered with appropriate clean covers. (C3 polyester or equivalent).

Torque Values for Bolts:

Standard torque values according to manufacturer standards for screw material should be used.

Parts prep work: alignment pins and helicoils

To facilitate assembly, parts requiring pins may to be prepared before assembly and will be listed to allow preliminary preparation of the parts, after cleaning and before starting general assembly. See E1000402 Current Rev.

Helicoils:

1. D0902251
2. D0902252

Dowels:

1. D0902250
2. D0902249
3. D0902251

Weight

Approximated weights are provided in this assembly procedure as an indication for safety purpose.
