E-Traveler DCC Number & Revision	Schematic DCC Number & Revision	Board Title	Board Serial Number
D080149-00-C	D020241	ISS Intensity Stabilization Servo	111
PCB Revision	Cognizant Design Engineer (COG)	E-Traveler Originator & Institution	Date
Rev D		Stefan Ballmer, Caltech	3/27/2008

Printed Circuit Board Fabrication Notes

Upon receipt of printed circuit board, note discrepancies and any required repair. Examples include fixing silkscreen, through-hole size correction etc.

- Replace "Belden 9232 Low Noise Coax" with something that doesn't short out.
- Many AD829's were oscillating and had no Ccomp. Produced x-talk even if outside signal path. Added Ccomp =15pf (data sheet).

Performed By:	Date
Stefan Ballmer	3/27/2008

Board Modifications made during initial manufacture to conform with existing DCNs. Cite applicable DCN numbers.

Modification for operation with LZH Laser
=====

- U6, U54, U20, U64 change to THS4131
- R31: add C=150nF in parallel (2.1kHz pole)
- by-pass U22: - wire from R94 ground side to jumper (JP2 or JP4) pin for connector (J1) minus
 - wire from R98 loop switch side to jumper (JP2 or JP4) pin for connector (J1) plus
(Note: We need single-ended drive. This way U9A drives the cable - not ideal but it works.)

Performed By:	Date
Stefan Ballmer	3/27/2008

Acceptance Testing

Test Procedure DCC Number & Revision

Performed By:	Date

List any discrepancies or deviations from limits established in the test procedure

Printed Circuit Board Fabrication Notes

Upon receipt of printed circuit board, note discrepancies and any required repair. Examples include fixing silkscreen, through-hole size correction etc.

	Performed By:	Date
- AD829 was mounted the wrong way	Stefan Ballmer	3/27/2008

Board Modifications made during initial manufacture to conform with existing DCNs. Cite applicable DCN numbers.

	Performed By:	Date
- Add C=10uF in paralell to C4 (provide quiet +5V) - Connect DSUB pins 5,6,7,8, and (most impartantly) pin 9 to ground patch	Stefan Ballmer	3/27/2008
