☛ Tom Prince

☛ Bruce Sears

☛ Roy Williams

Overview of Talk:

- Primary Purpose, Goals & Demands
- Tour of Hardware Design
- Tour of Software Design
- Supporting Users
- Further Reading
- Closing Remarks

Primary Purpose:

- First and foremost, the LIGO Data Analysis System is being implemented to detect and characterize gravitational waves from astrophysical sources.
- In addition, the LDAS will perform:
 - raw frame data archival,
 - database management functions for
 - ⇒ raw frame data descriptors,
 - ⇒ diagnostic trigger descriptors,
 - ⇒ and astrophysical filter (template) event descriptors,
 - data & metadata distribution services.

Principal Sources:

Binary Inspiral of Compact Stellar Objects

- 1 neutron star - neutron star
- 2 black hole - neutron star
- 3 black hole - black hole

} dominate LIGO requirements

Burst Events

- 4 supernovae (requiring coincidence between sites)

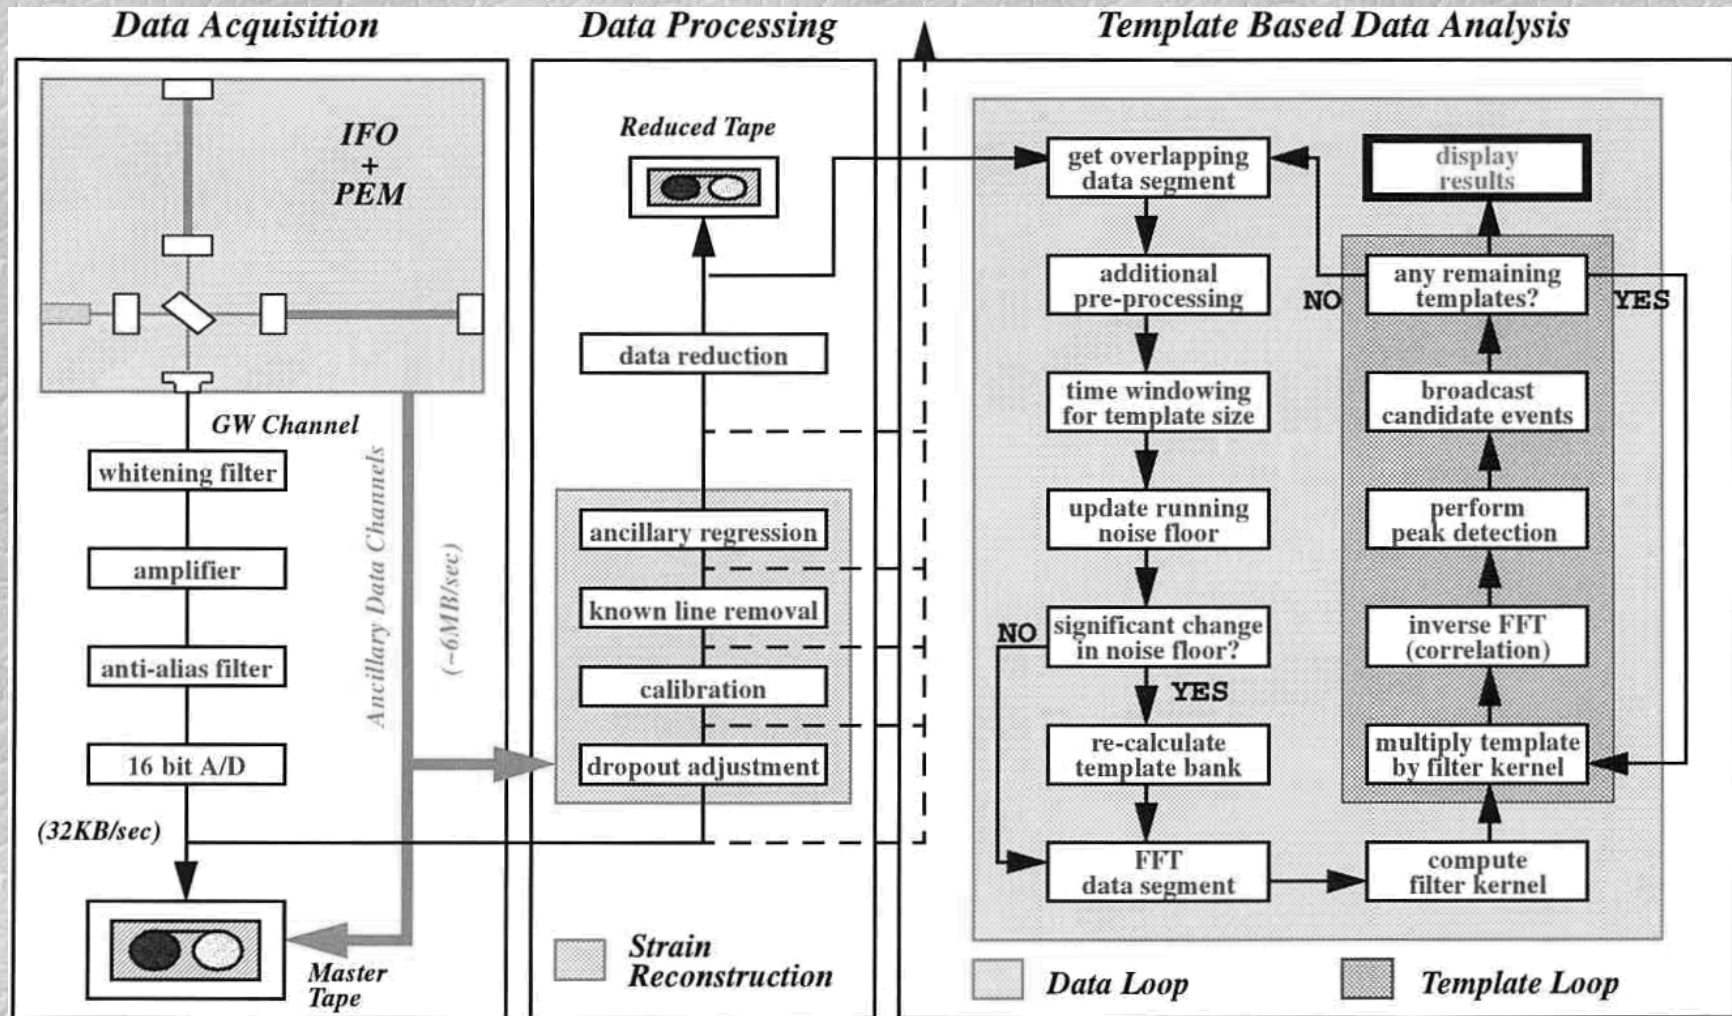

Periodic Sources

- 5 pulsars (all sky unlikely, but targeted searches easily carried out)

Others

- 6 black hole ring-downs
- 7 black hole mergers
- 8 stochastic background
- 9 serendipitous discoveries!

Data Flow Model:

Optimal Filtering Demands:

Computation:

Binary Inspirational Template Compute Requirements

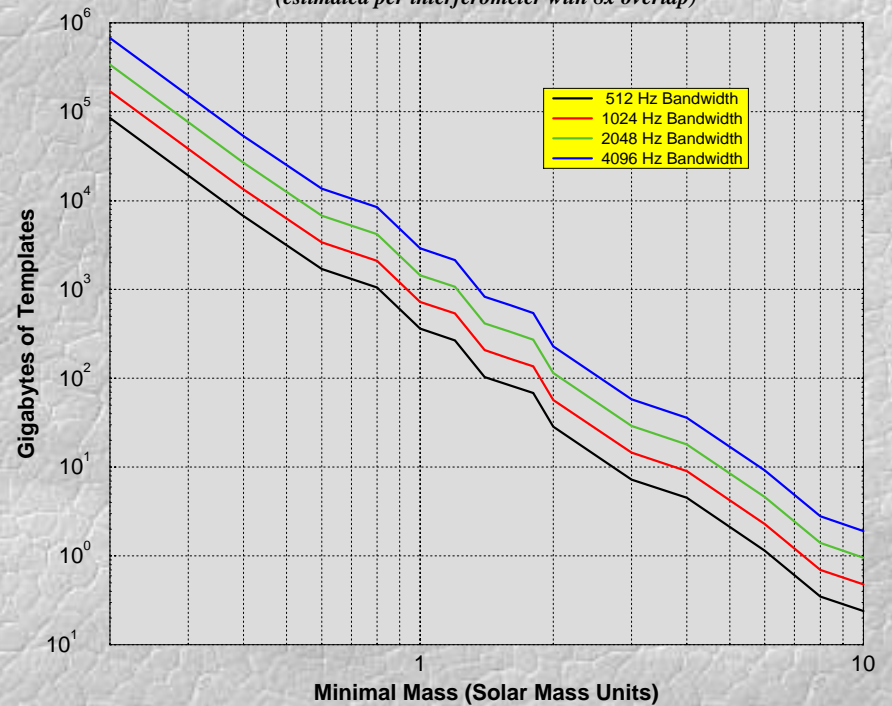

(estimated per interferometer with 8x overlap)

Templates:

Binary Inspirational Template Data Bank Size

(estimated per interferometer with 8x overlap)

Hardware Design Needs:

Requirements:

- *10-100 GFLOPS of Compute Performance & 0.5-5 TB of uncompressed Templates*
- *100-620 megabits per second point-to-point*
- *500 GB of On-Line Disk Cache*
- *50-500 TB Archived Data per Year*
- *50-500 GB of metadata per Year*
- *LAN & WAN Networks*

Technologies:

- *Beowulf (PC-Linux Clusters)*
- *Switched ATM & Fast-Ethernet for LANs*
- *SCSI Hard Disk Storage*
- *HPSS, Tapes (optical?)*
- *Database Capable of handling this Volume*
- *LIGO ATM & Fast-Ethernet LANs with ESNNet and vBNS connectivity between the Observatories & Archive*

Hardware Architecture^(online):

Hardware Architecture (offline):

Hardware Status:

- LDAS Hardware Design Relatively Complete
 - Procurement being delayed/staged as much as possible
 - PDR tentatively scheduled for March 11th
- WAN to Sites Established
 - T1 links at both Hanford, WA & Livingston, LA
- First LAN Hardware (ATM Switch) Arrived at Hanford
- Compact Beowulf Cluster Received from ALTA Technologies for Prototyping
- meta/Data Server Hardware Identified in conjunction with CDS Frame-Builder
- Establishing Archival Storage Specifications in collaboration with CACR

Software Design Needs:

Requirements:

- **Portability -**
 - ⇒ POSIX for UNIX I/O
 - ⇒ ANSI C/C++ for Compilers
 - ⇒ TCL/TK for Steering
 - ⇒ MPI for Parallel Computing
 - ⇒ ODBC for Database Clients
- **Extensibility -**
 - ⇒ Modular/Reusable Code
 - ⇒ OOP Design
- **Maintainability -**
 - ⇒ OO Languages Where Practical
 - ⇒ CVS Source Code Management
- **Flexibility -**
 - ⇒ Class/Object Design
 - ⇒ Modular Libraries
 - ⇒ Distributed Processing

Components:

- **Data Formats -**
 - ⇒ IGWD Frames
 - ⇒ Lightweight (Metadata, Events, Templates, Communications ...)
- **Libraries -**
 - ⇒ Supported Data Format I/O
 - ⇒ Numerical (FFT's, filters, etc.)
 - ⇒ POSIX & Socket interfaces
- **LDAS API's -**
 - ⇒ Supervisors to Data I/O
 - ⇒ Control, Monitor, & Management
 - ⇒ MPI Level Communications
 - ⇒ Filtering and Analysis
- **UI's -**
 - ⇒ TCL/TK (Wish Shell) GUI
 - ⇒ TCL Interpreter Command Line
 - ⇒ TCLet Plug-ins to Web Browsers

Standardized Data Formats:

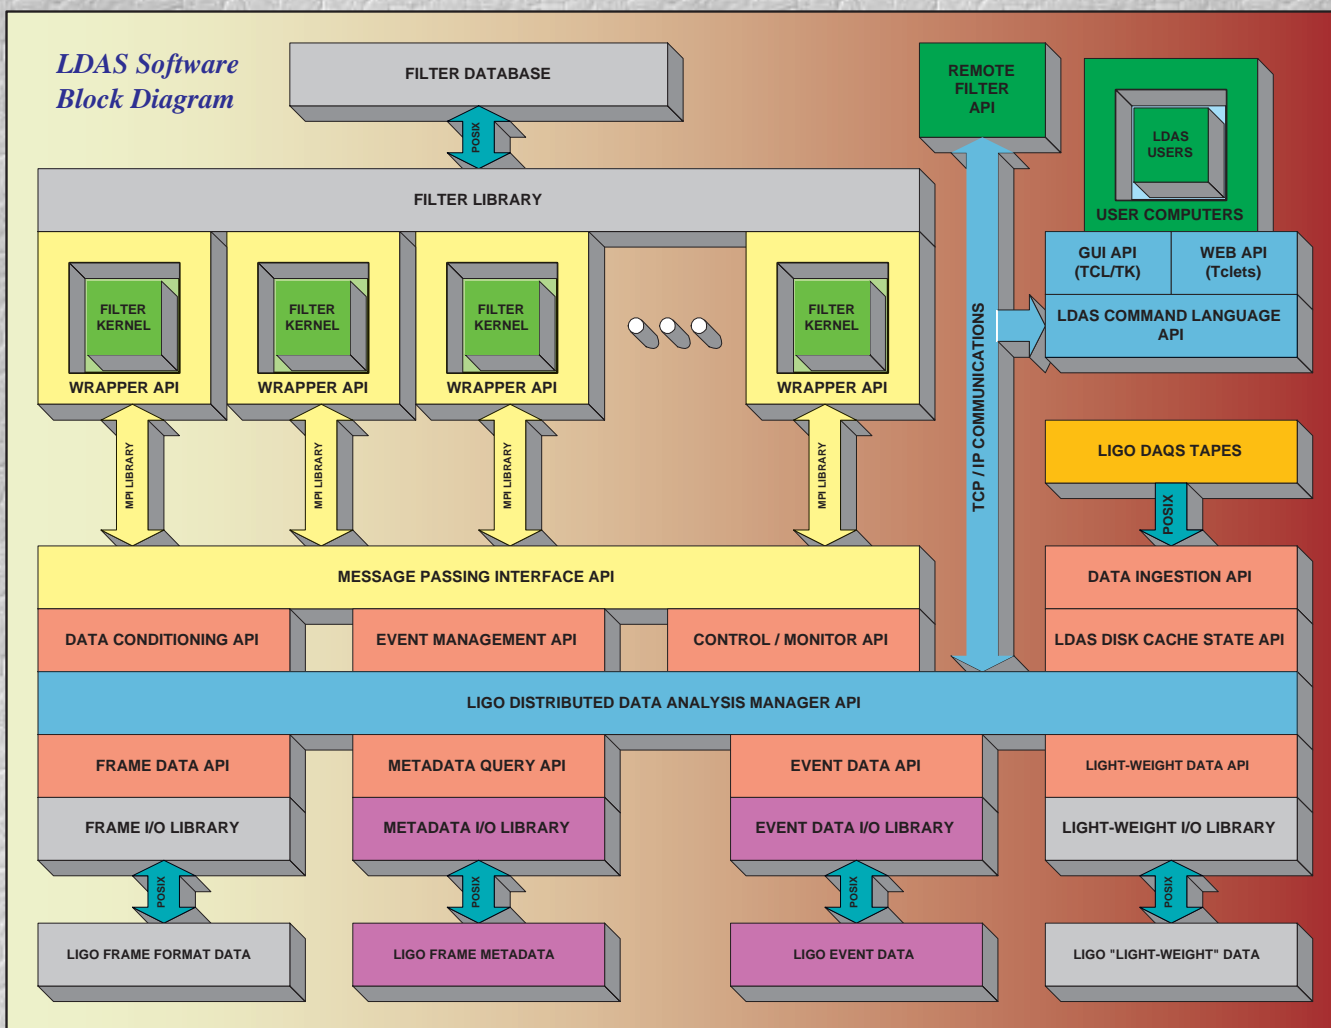

Frame:

- Structured (C-like) Format
 - ⇒ Samples of these structures:
 - ✓ ADC, Static, Detector, Trigger, ...
 - ✓ Simulated, History, Logs, ...
- Jointly Developed with VIRGO
 - ⇒ LIGO-T970130-B-E
 - ⇒ VIRGO-SPE-LAP-5400-102
- Original I/O Library in C
- C++ Class I/O Library
- Primary Uses:
 - ⇒ Data Acquisition
 - ⇒ Data Archival
 - ⇒ *Subsystem for Diagnostics*

Lightweight:

- Tagged (XML-based) Format
- Easily Parsed (*and written*)
 - ⇒ `<int_s format="ascii">57, 7, 15, 12, 15, 31, 755</int_s>`
- LIGO Defined Objects
 - ⇒ tables (n-tuplets),
 - ⇒ arrays (matrix, vector),
 - ⇒ vectors (time-series, power-spectra)
 - ⇒ Some Revisions expected
- Use Complement Frames!
 - ⇒ LIGO Event data
 - ⇒ LIGO Metadata
 - ⇒ Spectra & Time-series data
 - ⇒ Inter-process Communications

Software Architecture^(block):

Layered LDAS API Design:

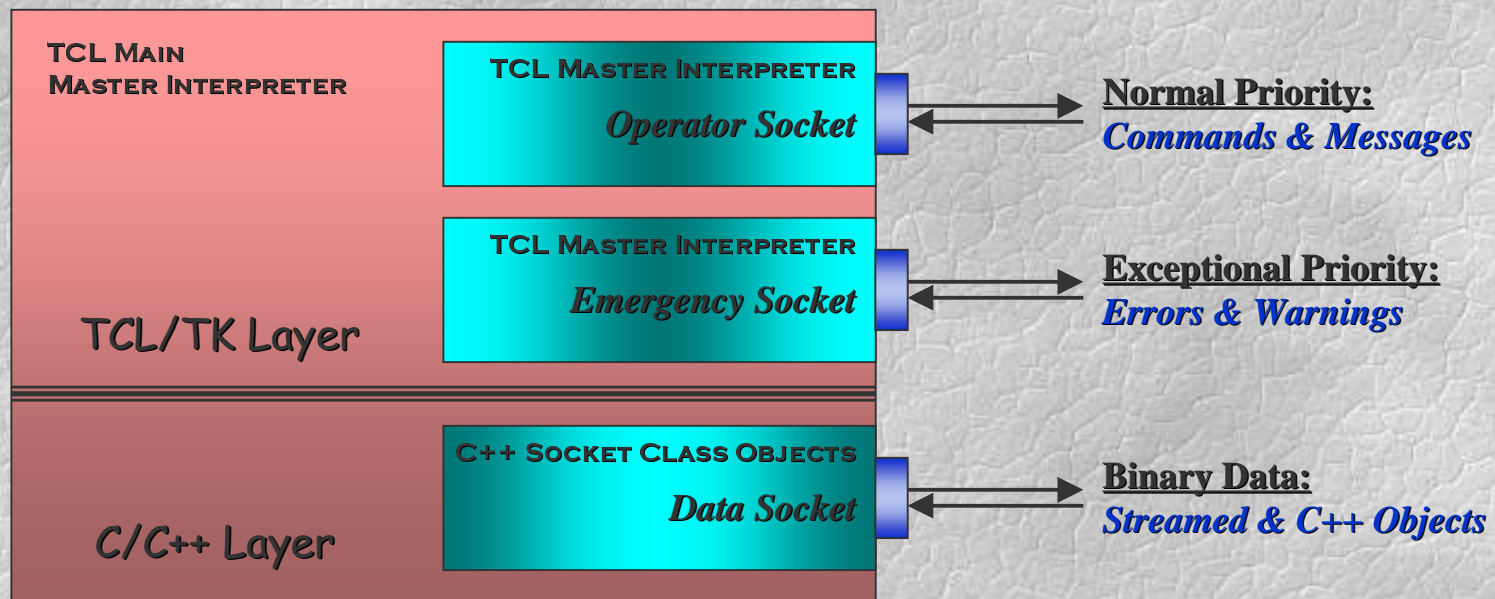

LDAS API's:

- **Two Layers:**
 - ⇒ **TCL/TK**
 - ⇒ **C/C++ (extends TCL Language)**
 - ⇒ **SWIG Unifies Layers**
- **GenericAPI (core) Module:**
 - ⇒ **Communications**
 - ✓ **TCL <-> C++**
 - ✓ **API <-> API**
 - ⇒ **Common TCL proc's:**
 - ✓ **Help**
 - ✓ **Logging**
 - ✓ **Command Socket Management**
 - ✓ **Resource Management**
 - ⇒ **Common C/C++ methods:**
 - ✓ **Data Socket Management**
 - ✓ **Internal Data Management**
 - ✓ **Class Save & Restore**
- **Custom (specialization) Module**

LDAS API Communications:

3 Types of Socket Communications in API's:

- Operator Sockets - Normal Inter-process Commands & Messages
- Emergency Sockets - Error & Warning Commands & Messages
- Data Sockets - Binary Data in either Raw Streams or C++ Objects

Distributed API Supervisor:

🐸 Manager API:

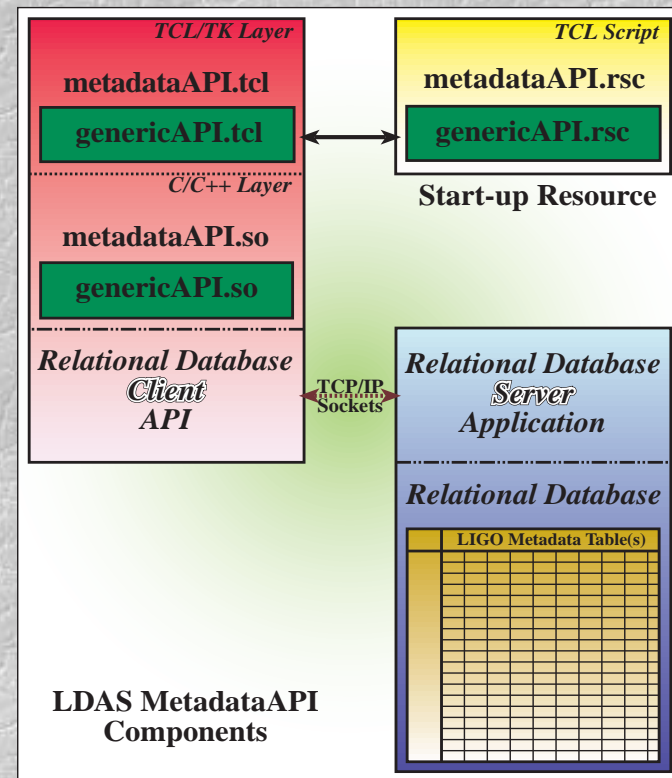

- **Two Supervisory Layers:**
 - ⇒ Single "top-level" Manager
 - ⇒ Multiple (3-10) Assistant Managers
- **Manager Layer:**
 - ⇒ **Communications**
 - ✓ *Manages sockets & queues*
 - ✓ *Interface for User API's*
 - ✓ *Point of contact for All API's*
 - ⇒ **Exception Management**
 - ⇒ **Log File Management**
 - ⇒ **System Operator Interface**
- **Assistant Manager Layer:**
 - ⇒ **Command Execution:**
 - ✓ *Parsing*
 - ✓ *Schedule Building*
 - ✓ *Command Sequencing*
 - ⇒ **Reports to Manager Layer**

Distributed Database API:

🐸 Metadata API:

- **Relational Database:**
 - ⇒ Using ODBC Standard for Calls
 - ⇒ Currently Developing with DB2
 - ⇒ Server can be Unix or NT Based
- **Table Contents:**
 - ⇒ **Frame Characterization:**
 - ✓ *Descriptors*
 - ✓ *Simple Statistical Summary*
 - ⇒ **Event Characterization:**
 - ✓ *Optimal Filter Results*
 - ✓ *Astrophysical parameters*
 - ⇒ **GDS Trigger Results**
 - ⇒ **CDS State Vectors**
 - ⇒ **LDAS Logs**
- **Metadata Query Services**
 - ⇒ **LDAS Processing Queries**
 - ⇒ **Data-Mining Queries**

Database Event Tables:

Event ID	Start Time	Delta Time	IFO Site	Number Frames	Mass 1	Mass 2	SNR	Confidence	Ringdown ID
Binary Inspirial Table									

Event ID	Start Time	Delta Time	IFO Site	Number Frames	Quality Factor	Frequency	SNR	Confidence	Inspirial ID
Black Hole Ringdown Table									

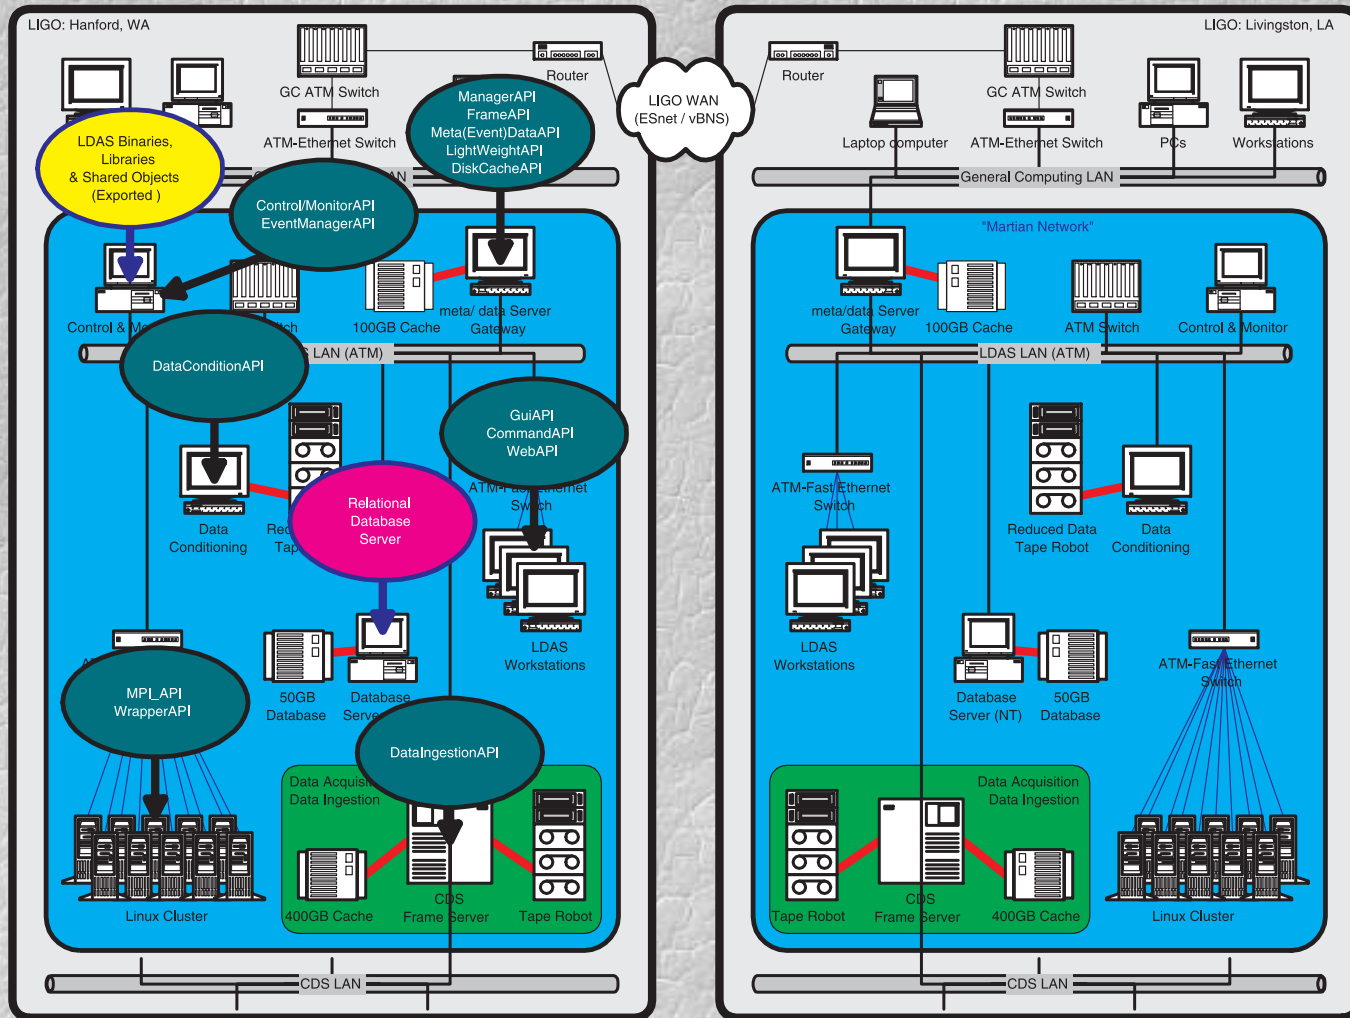

Event ID	Start Time	Delta Time	IFO Site	Number Frames	Sky Location	Frequency	Source Name	SNR	Confidence
Periodic Source Table									

Event ID	IFOWA4 Time	IFOWA2 Time	IFOLA4 Time	Duration	Number Frames	Sky Central	Sky Radius	SNR	Frequency	Bandwidth
Burst Table										

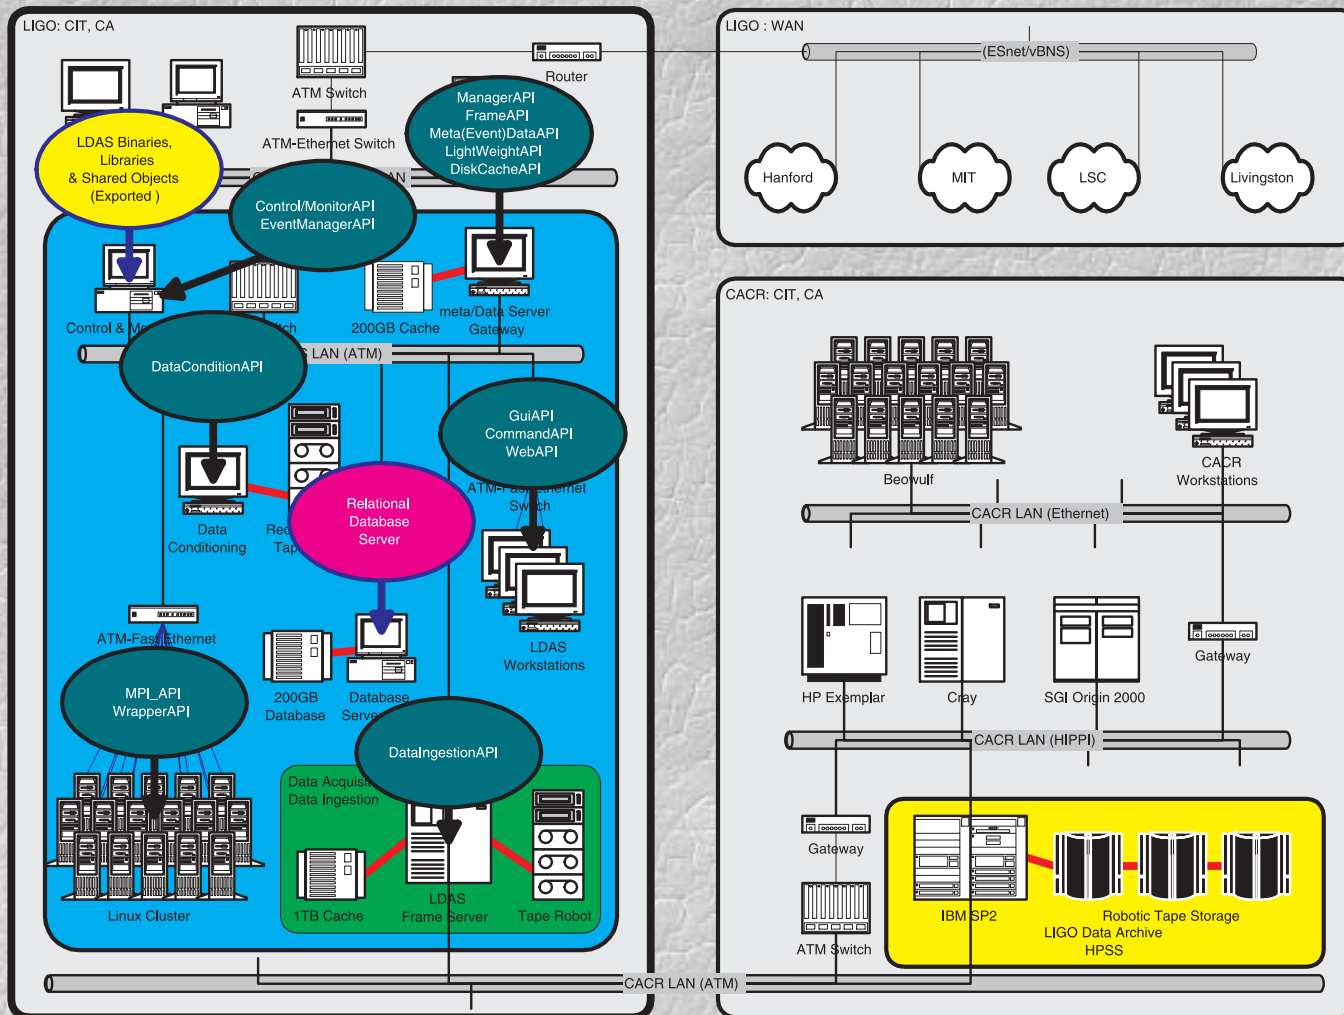

Event ID	Start Time	IFO Site	SNR	Filter Type	Par 1 Name	Par 1 Type	Par 1 Value	Par 2 Name	Par 2 Type	Par 2 Value	...	Par N Name	Par N Type	Par N Value
Source Independent Table														

see URL: <http://www.ligo.caltech.edu/~xhu/index.html> for Event, Frame, GDS, Log, CDS Table Descriptions

Software Mapping^(online):

Software Mapping^(offline):

Software Status:

First Software Deliverable:

☞ α -release Spring 99?

- ① LDAS Components to be included:
 - ⇒ GenericAPI
 - ⇒ FrameAPI
 - ⇒ Meta(Event)dataAPI
 - ⇒ LightWeightDataAPI
 - ⇒ DataConditioningAPI
 - ⇒ ManagerAPI
 - ⇒ Simple UserAPI
- ② Some "Quick Look" Capabilities
- ③ Support of Site Installation Activities
- ④ Provide User Base for Testing and Debugging System

LDAS User Classifications:

☞ Perusers - Browsers of Data Products

- ① Connection: Modem or Ethernet
- ② Tools of Choice: GUI & Web Browser

☞ Users - meta/Data Flow Manipulators + *Perusers*

- ① Connection: Modem, Ethernet, LDAS LAN or WAN
- ② Tools of Choice: GUI or Command Line Interface

☞ Developers - Algorithm/Infra-structure Coders

- ① Connection: Ethernet, LDAS LAN or WAN
- ② Tools of Choice: Raw Data or Sockets Directly into LDAS Data Flow

☞ Processes - Distributed Processes of LDAS

- ① Connections: LDAS LAN or WAN
- ② Tools of Choice: LDAS Command and Data Sockets Protocols

LDAS User Interfaces:

🐸 User Interface model based on TCL/TK

- Doesn't preclude other software languages:
 - ⇒ Any environment that can send LDAS Commands, properly formatted, to the ManagerAPI's Command Socket and receive LDAS Light-Weight Data Format can be made to work with LDAS!
- Portable between Unix / Windows / Mac Operating Systems

🐸 3 Types of User Interfaces Based on TCL/TK to be provided:

- Command Line Interfaces - TCL shell scripts which communicate with the LDAS ManagerAPI sockets
- Graphical User Interfaces - TK Wish shell widgets which communicate with the LDAS ManagerAPI's sockets
- Web Browser Interfaces - TCLet plug-ins that display widgets in web browsers & communicate with the LDAS ManagerAPI's sockets

"Smart" User Interfaces:

Initial Limited UI

- 1 Client/Server Socket Links
- 2 Server sends TCL/TK Code

Final Custom UI

- 1 Appended Functionality to UI
- 2 Provides centralized UI Code Management

The initial UI consists of a terminal window displaying TCL code for the LDAS server and a file manager window showing the directory structure of the LDAS installation.

```

source genAPI.tcl
get resources file with preferences
or die Ignominiously...

if { [ catch { sourceFile serverAPI.tcl } mess ] } {
    return "could not source serverAPI.tcl"
}

set operator [ openListenSock localhost operator safe ]
set emergency [ openListenSock localhost emergency ]

create an alias to allow client access to files.

interp alias $operator open {} \
safe_open $operator $rootPath

interp alias $operator fconfigure {} \
safe_fconfigure $operator

create an alias to allow limited exec'ing of server commands

interp alias $operator exec {} \
safe_exec $operator

create an alias to allow the slave to cd "home"

interp alias $operator cd {} \
safe_cd $operator $rootPath

create an alias to allow safe globbing

interp alias $operator glob {} \
safe_glob $operator *
    
```

Socket Based Communications

The final UI features a graph window displaying a plot of data points and a file manager window showing the directory structure of the LDAS installation.

The final UI features a graph window displaying a plot of data points and a session log window showing the output of the LDAS system.

The final UI features a graph window displaying a plot of data points and a table of contents window showing the structure of the LDAS system.

LDAS Documentation:

🐸 On the Web: LIGO Data Working Group Bulletin Board

- http://www.ligo.caltech.edu/~prince/LDCG_1sc/LDCG.html
 - ⇒ LDAS Technical Review Documents
 - ⇒ LDAS Software Guidelines
 - ⇒ LDAS Software Requirements
 - ⇒ LDAS Software Specifications
 - ⇒ LDAS Code Formatted as HTML
 - ⇒ LDAS Presentations
 - ⇒ Other Useful Documentation
- LDAS Source Code Presentation
 - ⇒ C++ to HTML using DOC++
 - ⇒ TCL/TK to HTML using TCLDoc
 - ⇒ CVS Server to LDAS Software Repository (password protected)

Closing Remarks:

- Primary Purpose - Detection Of Gravitational Waves Using LIGO Data
- Design Is Portable, Extensible, Maintainable & Flexible
- Supports Users At Multiple Levels
 - e.g., Perusers, Users, Developers, Processes
- Powerful "Smart" User Interfaces Based On TLC/TK Have Been Prototyped
- Significant Amounts Of Coding Still Ahead!
