# ISS SECOND LOOP SERVO

## *Circuit Board Documentation*

---

Jan H. Pold (*Max-Planck-Institute for Gravitational Physics*)

### **Abstract**

This is the Servo for the aLIGO second loop power stabilization. It takes the input signal from PDs 1-4 and 5-8, selects the in-loop sensor and provides further filtering. There is an additional channel that provides an IMC pole compensation, in case the first loop sensor is placed downstream the IMC.

## Safety Instructions

In order to operate the circuit properly and safely, review the following guidelines before installing and using the unit. Failure to do so may result in equipment damage or bodily injury:

---

This circuit was designed as a laboratory equipment to be operated only by trained and qualified technicians in research institutes or development departments. For safety reasons, usage by other persons or in other environments is *not* recommended.

---

- This circuit uses extra-low voltage ( $< 50 \text{ V}_{\text{AC}}$  and  $< 75 \text{ V}_{\text{DC}}$ ) and is therefore exempt from the regulations of the *Low Voltage Directive* (2006/95/EC).
  - The unit does not contain any mechanical drive system. Therefore, the regulations of the *Machinery Directive* (2006/42/EC) do not apply.
- 

## Sicherheitshinweise

Nehmen Sie vor Aufbau und Inbetriebnahme des Geräts folgende Empfehlungen zur Kenntnis, um die Schaltung korrekt und sicher zu betreiben sowie Schäden und Verletzungen zu vermeiden:

---

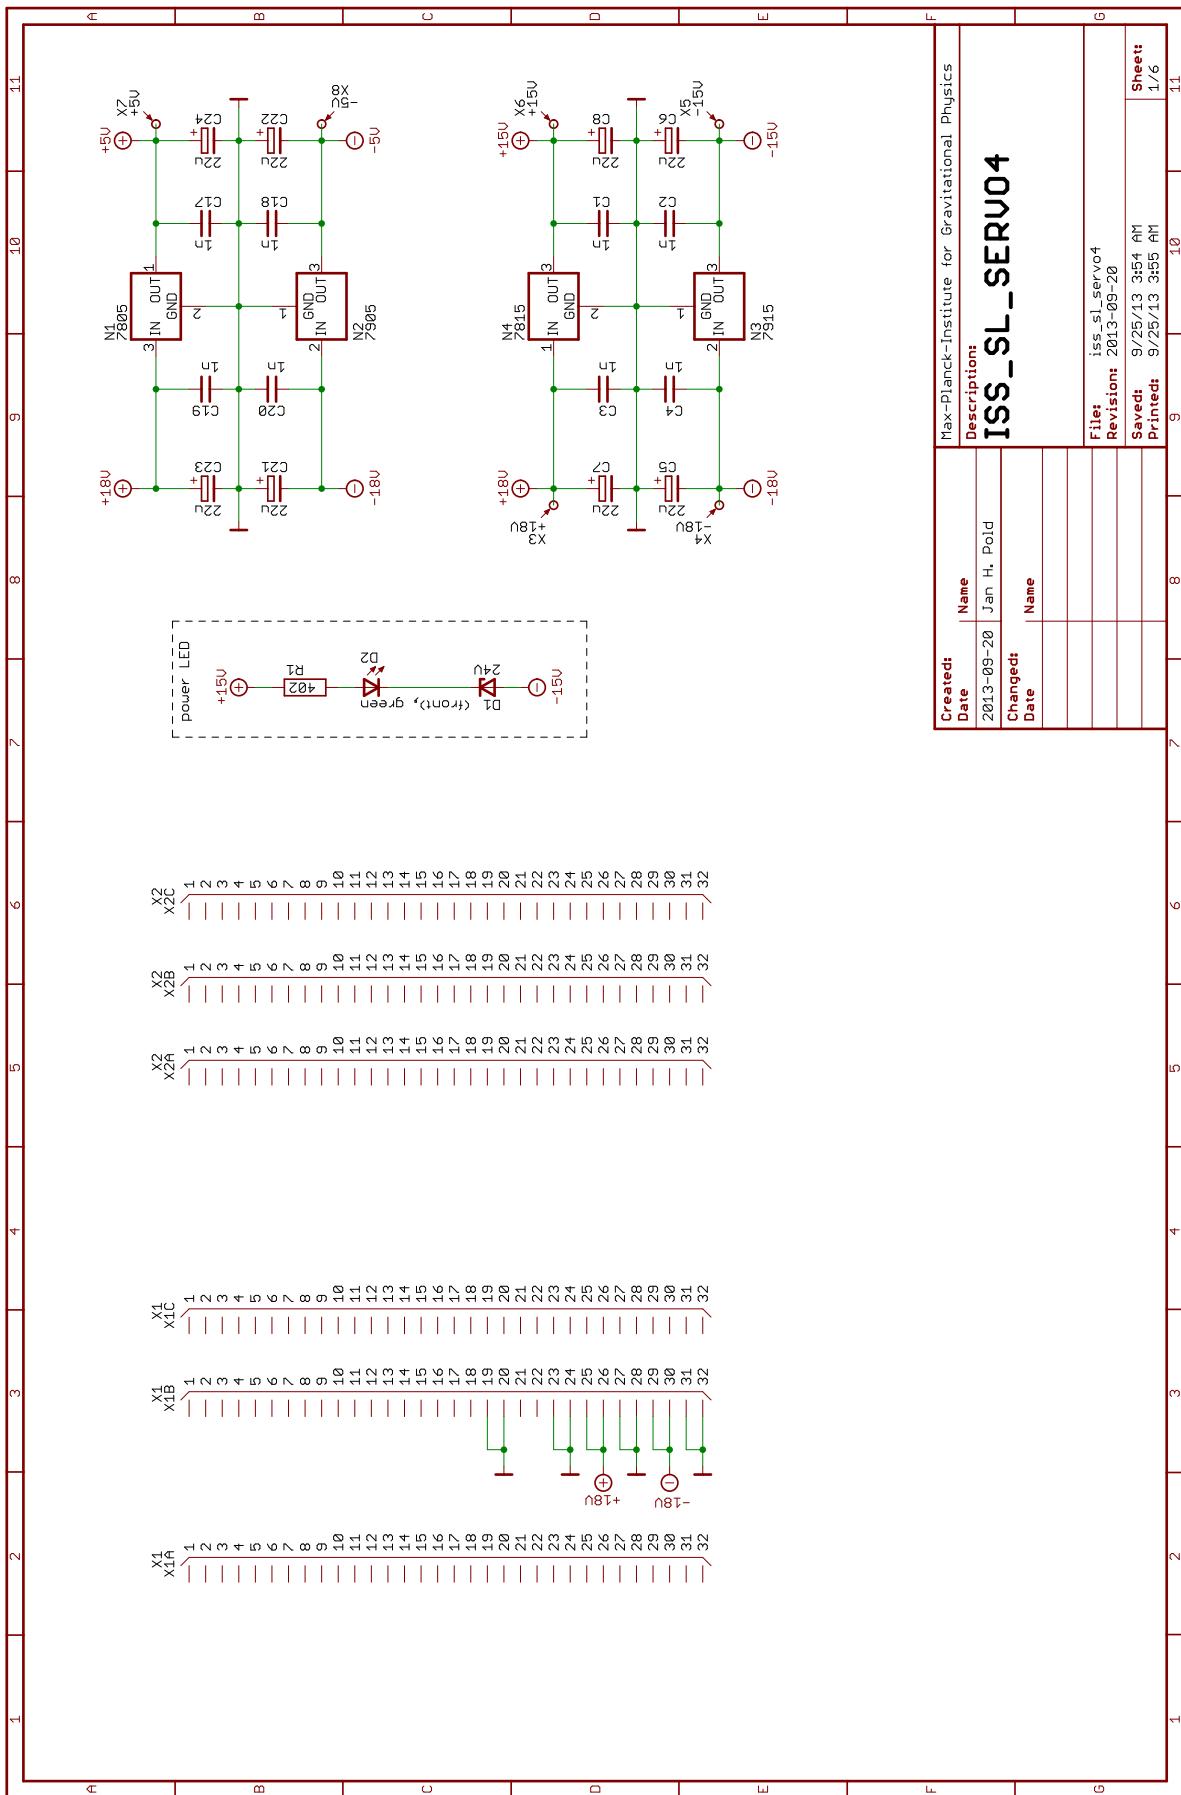

Diese Schaltung wurde als Laborausstattung entworfen, die nur von qualifizierten und eingewiesenen Technikern in Forschungsinstituten oder Entwicklungsabteilungen benutzt wird. Aus Sicherheitsgründen wird die Verwendung durch andere Personen oder in anderer Umgebung *nicht* empfohlen.

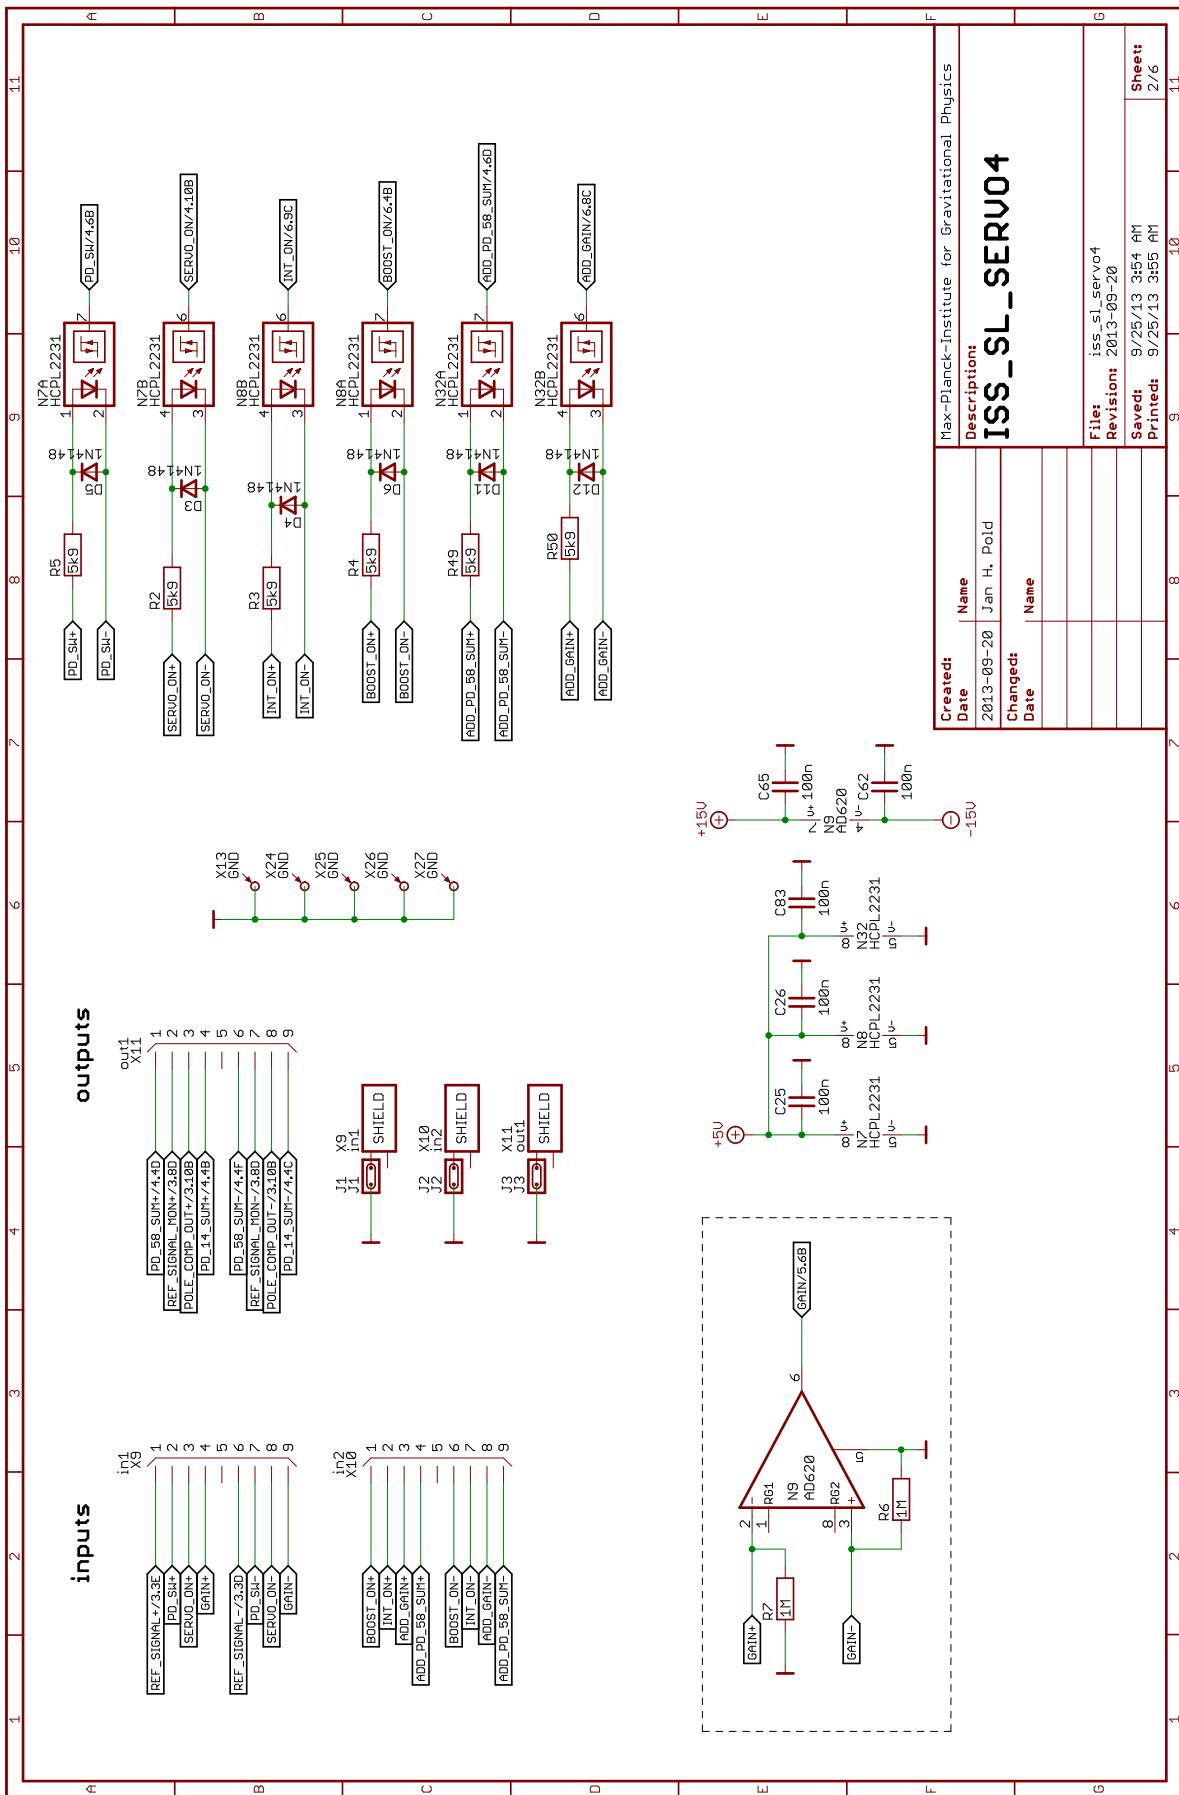

---

- Diese Schaltung verwendet Kleinspannung ( $< 50 \text{ V}_{\text{AC}}$  und  $< 75 \text{ V}_{\text{DC}}$ ) und unterliegt daher nicht den Bestimmungen der *Niederspannungsrichtlinie* (2006/95/EC).
  - Das Gerät enthält kein mechanisches Antriebssystem – die Bestimmungen der *Maschinenrichtlinie* (2006/42/EC) sind daher nicht anwendbar.
-

**Figure 17:** Board bottom view showing drills with 3.2 mm (0.126 in) diameter

## Circuit Lists

**Drill list:** The following table shows all *final* drill diameters used in the board. When manually drilling the clearance holes, round up to the nearest available drill bit diameter, ensuring that all components fit well. When manufacturing *through-plated* boards, adjust for the additional copper coating by increasing the diameter accordingly.

$\varnothing$ [ $\mu\text{m}$ ]	$\varnothing$ [mm]	$\varnothing$ [in]	Count
813	0.8	0.032	738
889	0.9	0.035	29
991	1.0	0.039	31
2692	2.7	0.106	6
3175	3.2	0.125	6
3200	3.2	0.126	2
Total			812

**Table 1:** Drill diameters used in the board

**Standard properties:** If not explicitly stated otherwise in the schematics or value and part lists, the circuit components have the following standard properties. Parts with ‘better’ properties can be easily substituted, but care should be taken if the specifications are *not* met.

- Wired resistors: Metal film 0.6 W, 1%, 200 V, TK 100
- SMD resistors: 1%, 150 V, TK 50, MiniMELF in thin film, other packages in thick film technology

**Value list:** The following list shows all components available on the board (sorted by part *values*) and can be used to quickly gather components. Additional information can possibly be found directly on the board (or in the schematics).
