Louisiana State University

(Results presented on behalf of the LIGO Scientific Collaboration, the Virgo Collaboration and the KAGRA collaboration)

Kavli symposium, March 5, 2023

# Gravitational waves: basic math

Gravitational waves are quadrupolar distortions of distances between freely falling masses. They are produced by time-varying mass quadrupoles.

$$G_{\mu\nu} = \frac{8\pi G}{c^4} T_{\mu\nu} \quad (= 0 \text{ in vacuum})$$

$$g_{\mu\nu} = \eta_{\mu\nu} + h_{\mu\nu} \quad h = \frac{\Delta L}{L}$$

$$h_{\mu\nu} \sim \frac{2G}{c^4 r} \ddot{I}_{\mu\nu}$$

6 October 2020

The Royal Swedish Academy of Sciences has decided to award the Nobel Prize in Physics 2020

with one half to

**Roger Penrose**  
University of Oxford, UK

*“for the discovery that black hole formation is a robust prediction of the general theory of relativity”*

and the other half jointly to

**Reinhard Genzel**  
Max Planck Institute for Extraterrestrial Physics, Garching, Germany and University of California, Berkeley, USA

and

**Andrea Ghez**  
University of California, Los Angeles, USA

*“for the discovery of a supermassive compact object at the centre of our galaxy”*

# Press Release: The Nobel Prize in Physics 2017

3 October 2017

The [Royal Swedish Academy of Sciences](#) has decided to award the Nobel Prize in Physics 2017 with one half to

**Rainer Weiss**

LIGO/VIRGO Collaboration

and the other half jointly to

**Barry C. Barish**

LIGO/VIRGO Collaboration

and

**Kip S. Thorne**

LIGO/VIRGO Collaboration

*"for decisive contributions to the LIGO detector and the observation of gravitational waves"*

## Gravitational waves finally captured

On 14 September 2015, the universe's gravitational waves were observed for the very first time. The waves, which were predicted by Albert Einstein a hundred years ago, came from a collision between two black holes. It took 1.3 billion years for the waves to arrive at the LIGO detector in the USA.
